

# LACELLIC

We are illuminating  
the future of medicine.

LACELLIC LAB is creating a new  
paradigm in precision and  
regenerative medicine.

We are opening new horizons in medicine and cosmetics  
through proprietary cell therapy, immune cell cultivation,  
and serum-free media technology.

# Conventional cell therapy faces critical limitations.

**Unstable Quality & High Failure Rates:**  
Procedures using animal serum media suffer from inconsistent outcomes.

**Significant Side Effects:** The use of animal-derived components, like Fetal Bovine Serum, introduces risks and potential adverse reactions.

**Ethical & Biological Concerns:** Animal-based materials raise significant ethical questions and create potential for biological issues.

# Our proprietary serum-free media is the breakthrough that changes everything.

To overcome the inherent risks of animal serum, we developed our own stem cell culture medium.

This technology eliminates the need for animal components, unlocking a new standard of safety and efficacy.

Patent No. 10-2021-0008888

# We deliver unparalleled results through four key advantages.

## High Stability

Enables the cultivation of uniform, high-quality cells, eliminating the inconsistencies and high failure rates of animal-serum media.

## Proven Technology

As the first in Korea to develop and commercialize serum-free media, our research leadership is proven.

## Economic & Supply Stability

Our in-house automated facilities and research labs ensure a stable, reliable production and supply chain.

## Ethical & Safe

Formulated with inorganic ions, organic ions, hormones, and vitamins to prevent biological issues and resolve social and ethical concerns.

# Our process goes beyond storage to ensure maximum cell activation and efficacy.

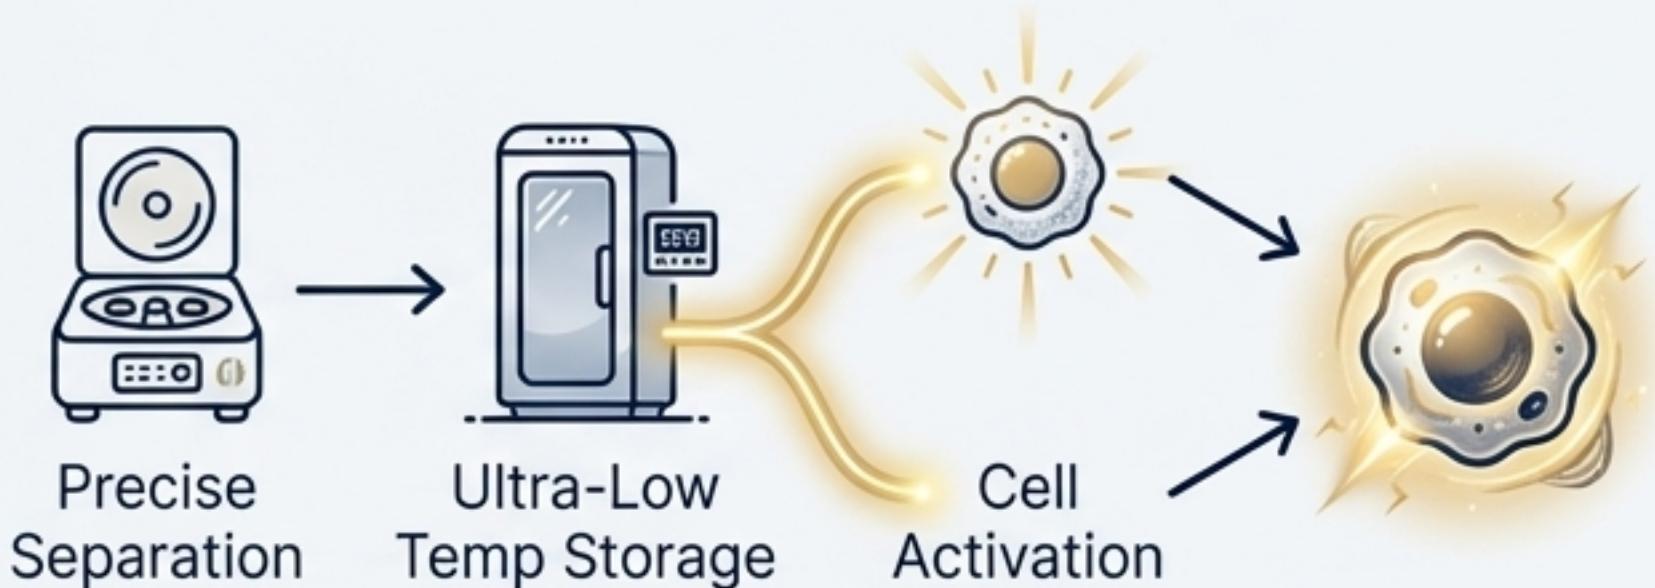

## Conventional Methods

- Simple cell collection.
- Basic freezing and storage.
- Often relies on outsourced procedures.

**Result:** Lower cell activity post-infusion.

## The LACELLIC Method

- Precise separation of cells from fat and tissue.
- Specialized ultra-low temperature storage.
- **Crucial Differentiator:** A simultaneous 'cell activation procedure' is performed.

**Result: A significant difference in the activity of stem and immune cells after administration.**

# Our foundational technology powers two revolutionary therapeutic platforms.

**Evo-STEM**

**Evo-NK**

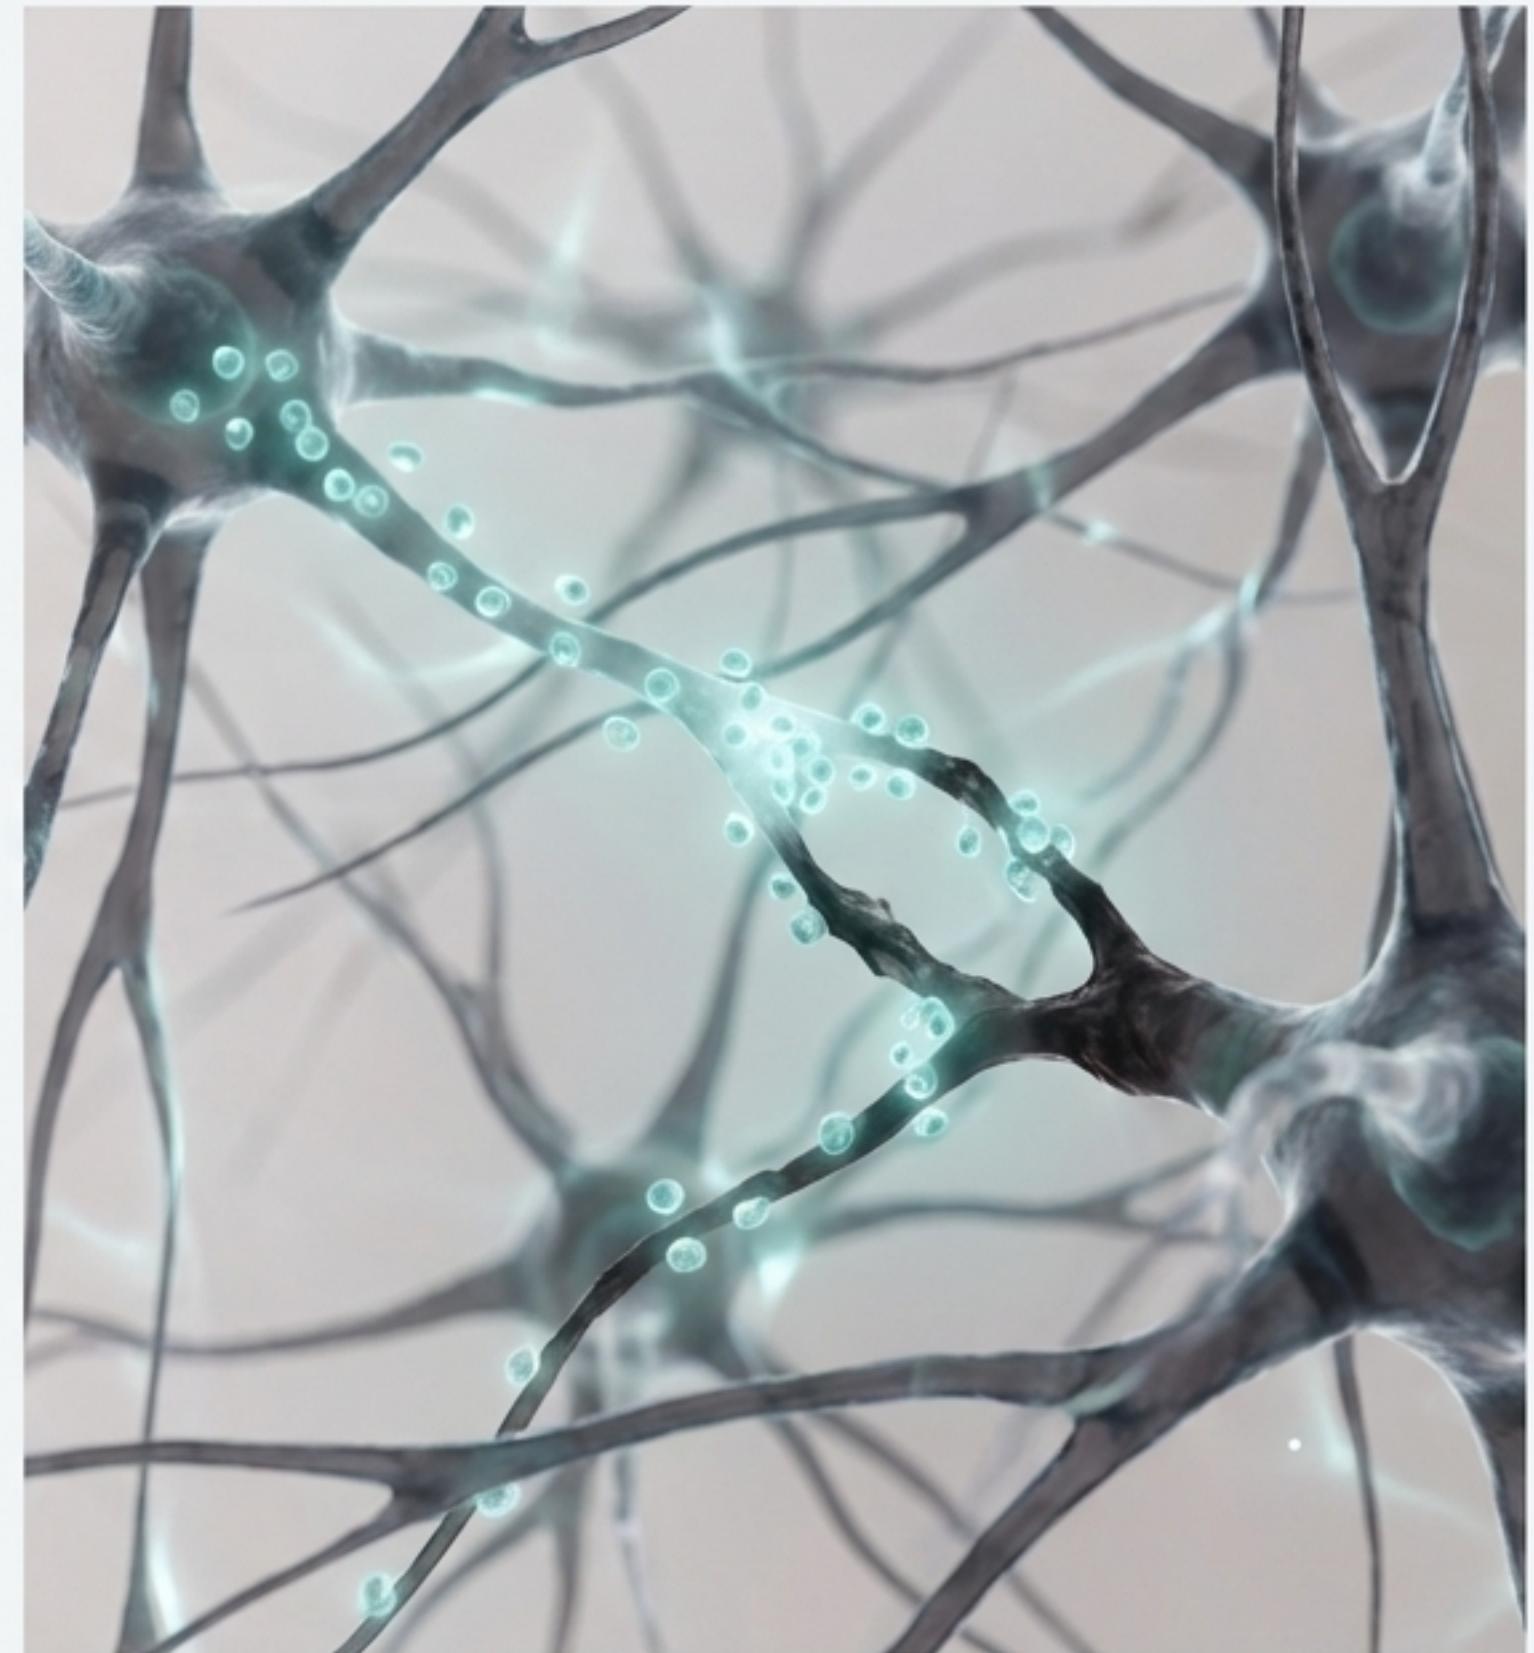

From this breakthrough, we have engineered two distinct solutions designed to redefine regenerative medicine and cancer treatment.

**Evo-STEM:** A next-generation stem cell platform for regeneration and anti-aging.

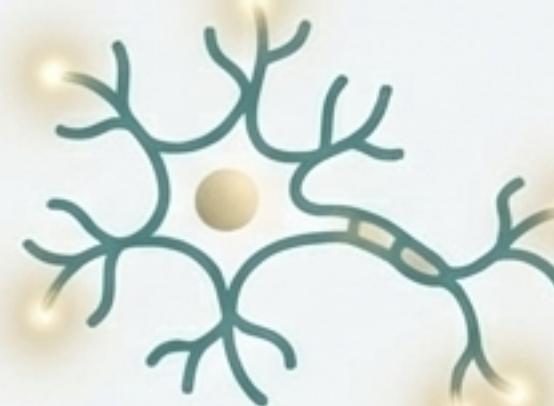

**Evo-NK:** A new era in personalized immunotherapy for cancer treatment.

# Evo-STEM: Engineering an environment for cells to rejuvenate themselves.

Evo-STEM is a next-generation stem cell platform that migrates to damaged areas, differentiates, and promotes the body's natural power to regenerate.

# Evo-STEM delivers comprehensive regeneration and protection.

## Nerve & Tissue Regeneration

Migrates to the site of injury to differentiate and actively promote the regeneration of damaged tissues and nerves.

## Inflammation Reduction & Neuroprotection

Exhibits powerful anti-inflammatory and neuroprotective effects, helping to slow disease progression and prevent additional cellular damage.

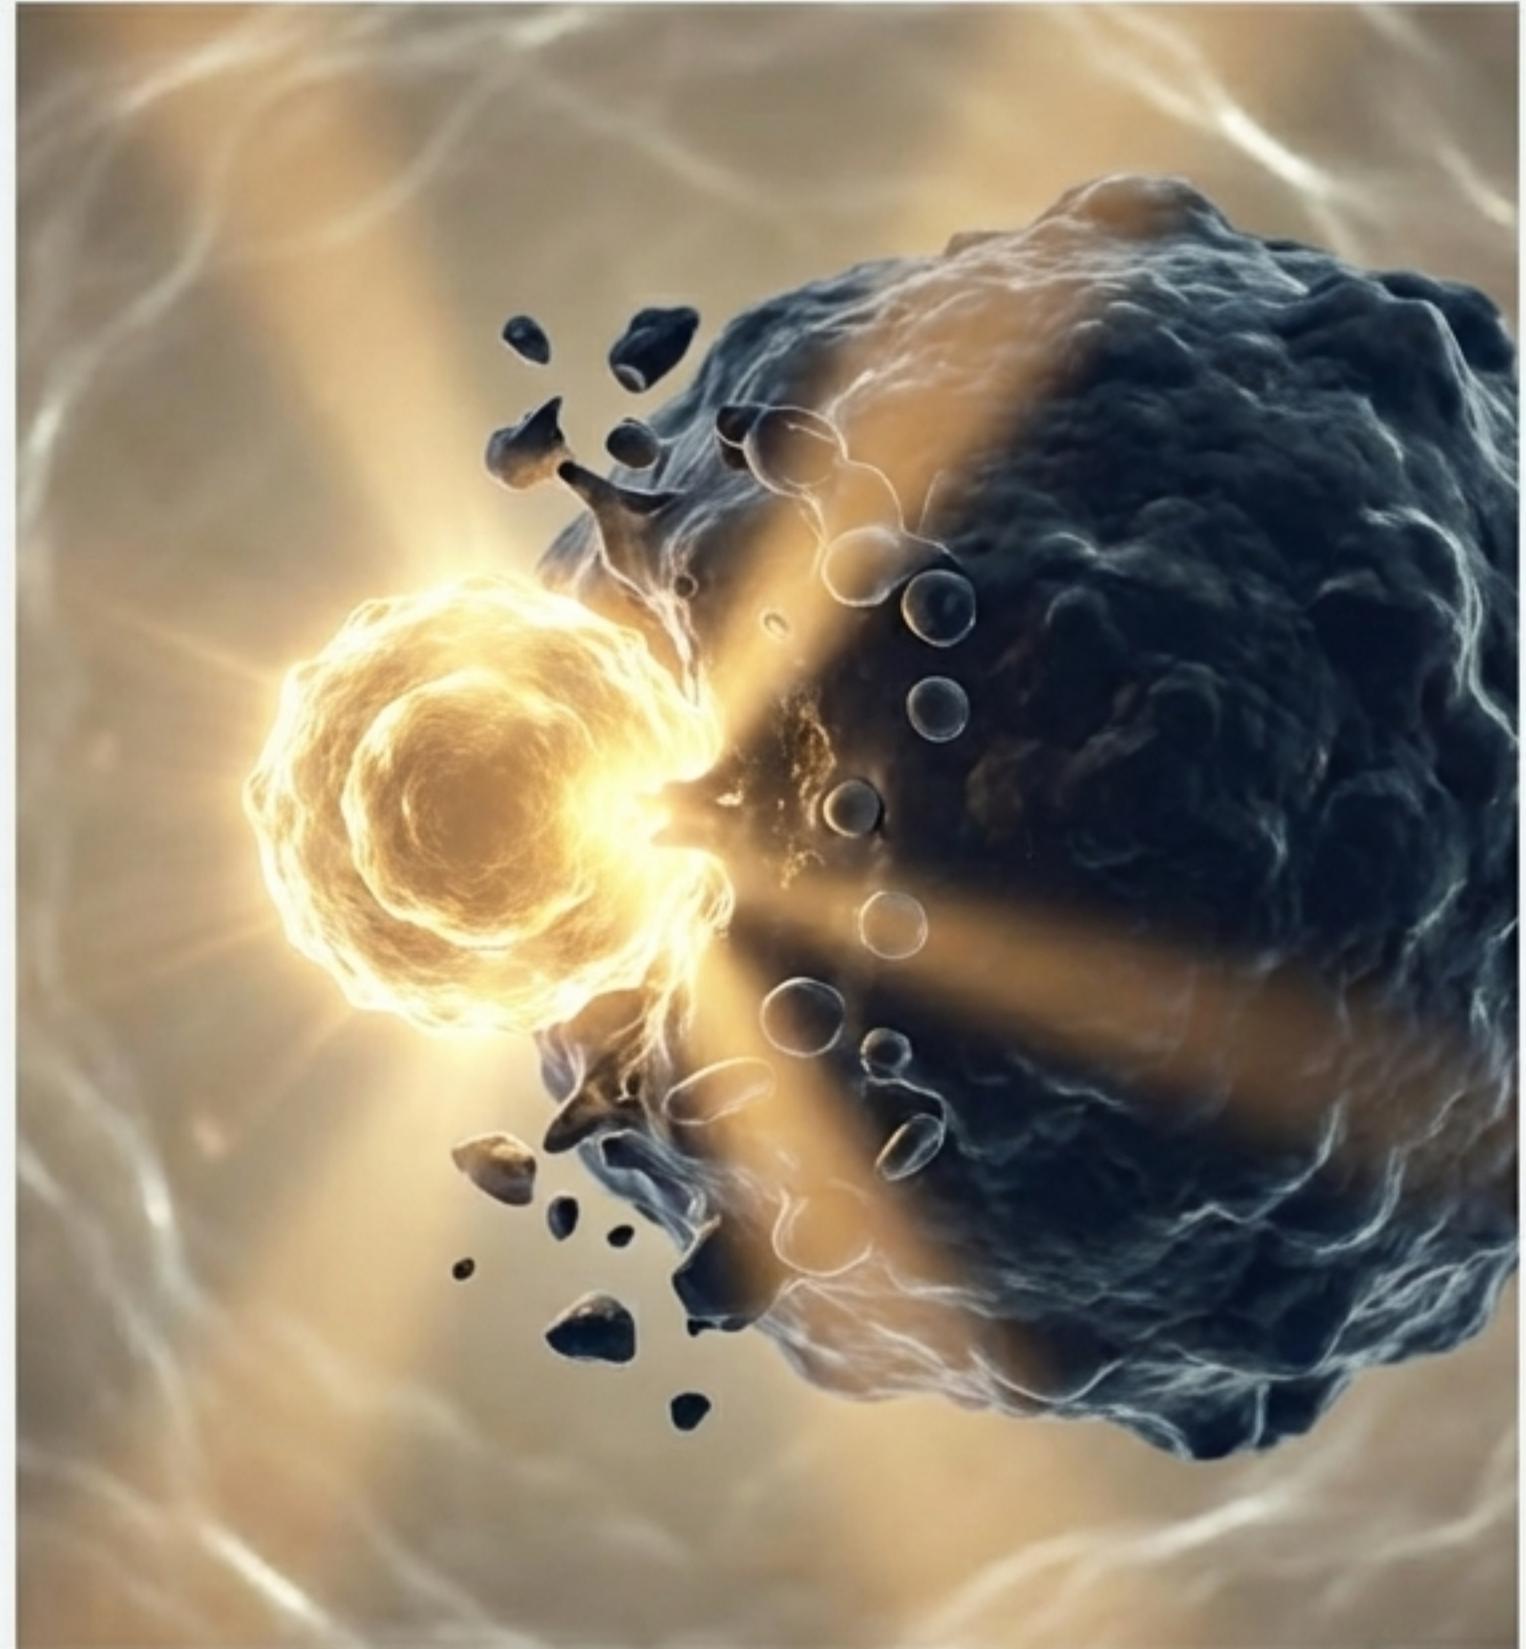

## Advanced Immune Modulation

Utilizes autologous platelet-based technology to minimize immune rejection, ensuring rapid recovery and the highest level of safety.

# Evo-NK: Leading a new era in precision cancer immunotherapy.

By maximizing the power of the body's own Natural Killer cells, Evo-NK offers a highly targeted, personalized, and effective approach to cancer treatment.

# Evo-NK enhances the body's natural defenses against cancer.

## Maximum Activation

Unlike conventional methods, Evo-NK's unique activation process maximizes the cancer cell-killing killing ability of NK cells.

## Enhanced Natural Killing Function

Activated Evo-NK cells have an improved innate ability to recognize and eliminate cancer cells by secreting targeted substances that induce apoptosis (cell death).

## Personalized Precision Therapy

Uses the patient's own NK cells, drastically reducing the risk of immune rejection and severe side effects.

## Systemic Immune Enhancement

Provides long-term health benefits by helping to prevent cancer recurrence and increasing resistance to other diseases.

# Our technology is supported by a state-of-the-art, integrated facility.

LACELLIC is not a broker. We control every critical step of the process in-house.

- ✓ Dedicated LACELLIC LAB: Our own research and development center.
- ✓ Automated Production Facilities: Ensuring consistent quality and stable supply.
- ✓ End-to-End Quality Control: From cell separation to activation and administration.

# We operate with full certification and a commitment to patient security.

## Proprietary Technology

Patent No. 10-2021-0008888

## Official Government Registrations

Foreign Patient Attraction Business:  
No. A-2025-01-01-06104

Tourism Business Registration:  
No. 2025-000027

## Comprehensive Insurance Coverage

Foreign Patient Guarantee Insurance: **100 Million KRW**

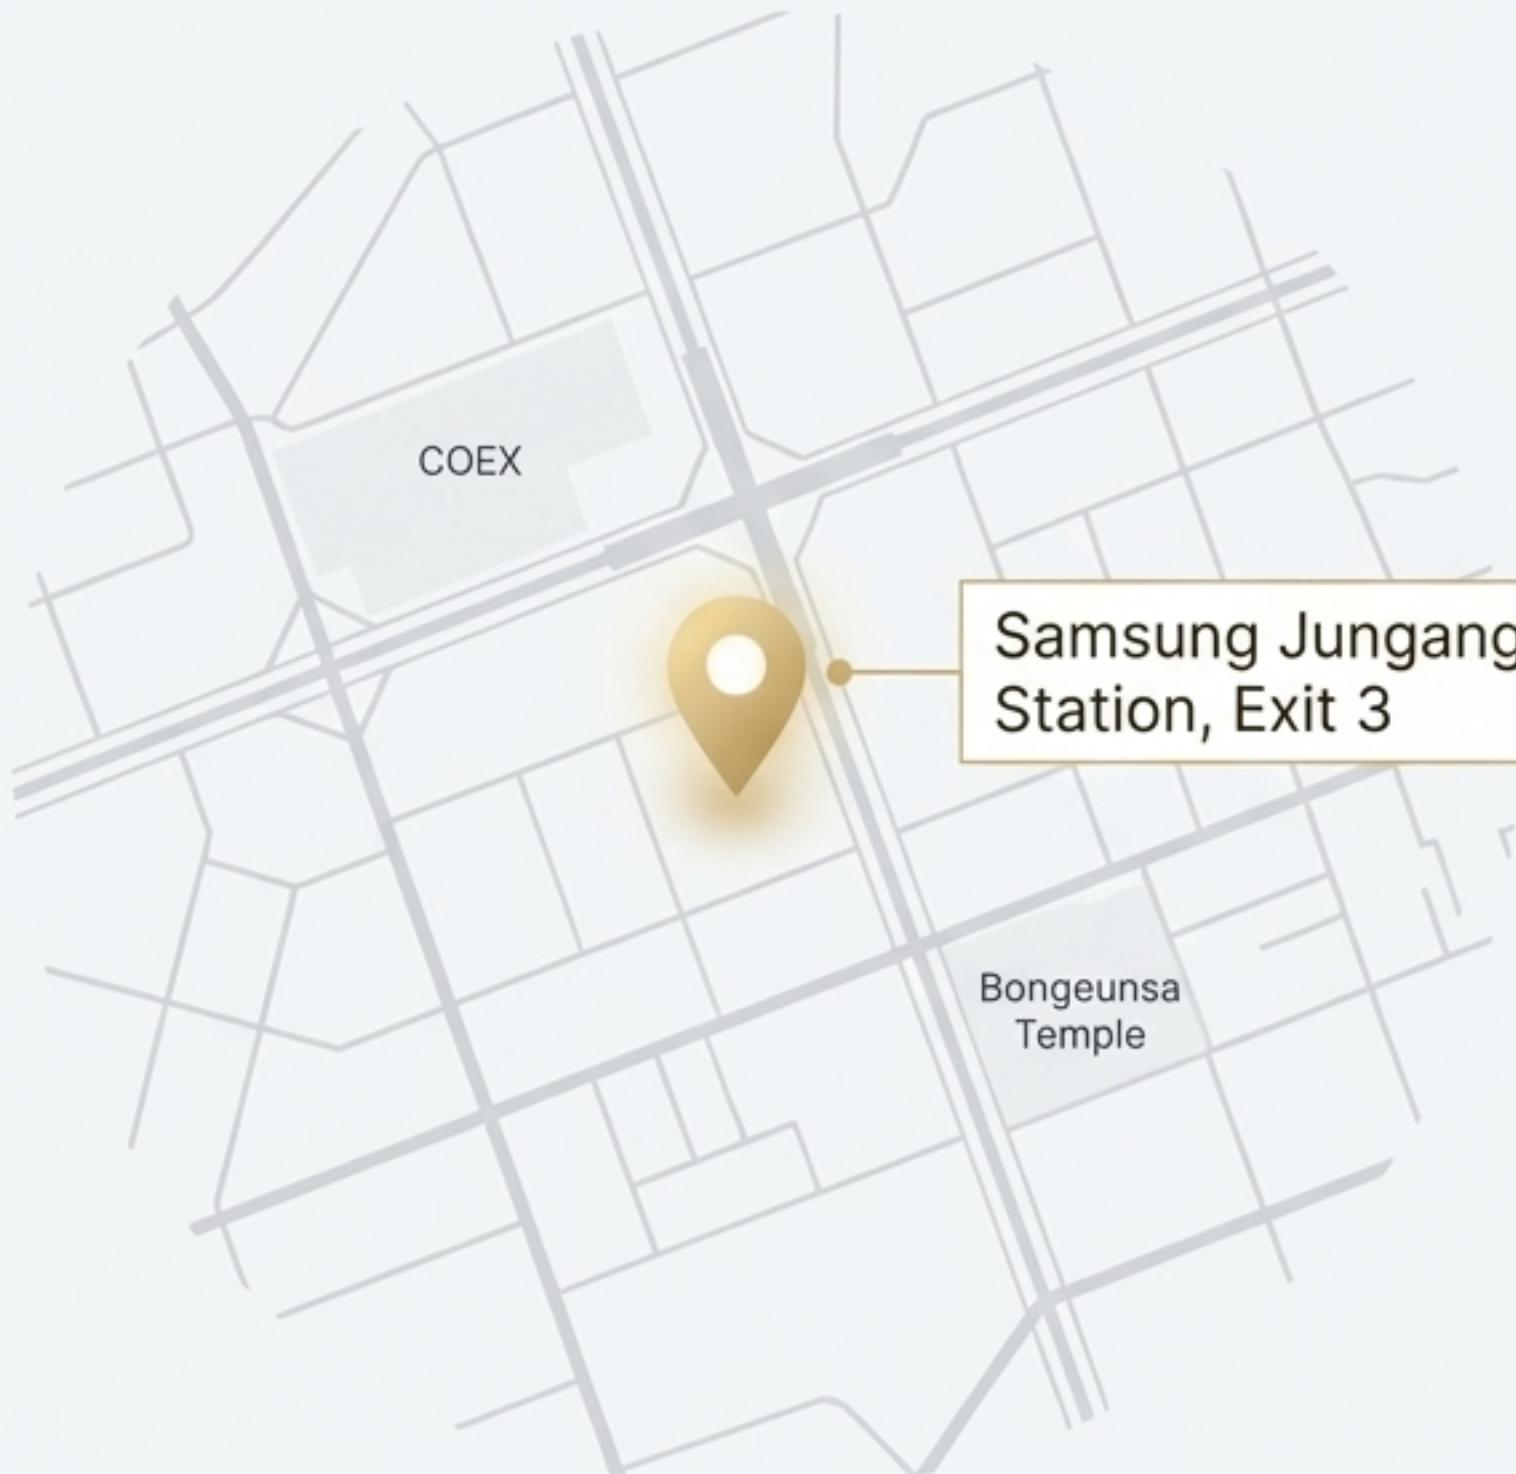

Comprehensive Travel Guarantee Insurance: **50 Million KRW**

# LACELLIC leads through a synthesis of innovation, stability, and ethics.

By maximizing the regenerative potential of cells through our proprietary immune cell cultivation and serum-free media system, we provide innovative solutions for anti-aging and intractable diseases. We have built our company to simultaneously realize:

- **Stability**: In quality and supply.
- **Technology**: Proven by our proprietary patents.
- **Economy**: Through in-house production.
- **Ethics**: By eliminating animal-derived components.
